It's All About Water™

Environmental Site Characterization & Remediation

Dealing with contaminated properties has been an unfortunate aspect of business for many years. GeoServices, Ltd. has more than 20 years' experience with site characterization and remediation of contaminated properties. Our experience includes a broad range of activities ranging from regulatory mandated tasks to voluntary cleanup actions and we have successfully taken projects to completion under various state programs, such as Pennsylvania's Act 2. At GeoServices, we use the most timely and cost-effective solutions available to minimize characterization and remediation costs. However, as minimizing liability is the most important aspect of these efforts, we never compromise when it comes to ensuring that the environment and properties are protected.

Our experience in environmental site characterization and remediation includes:

- Pennsylvania's Act 2
- Brownfields
- Sampling and Testing of Soils, Sediments, Ground Water, and Air
- Ground Water Modeling
- Fate and Transport Modeling
- Risk Assessment
- Monitoring and Modeling of Vapor Intrusion
- Environmental Site Assessments (Phase I, II, and III)

GEOSERVICES collects characterization data in a careful, considered manner because we recognize that the level of effort required for remediation is determined by this data. Frequently, fate and transport modeling and risk assessment can be used to document that limited remedial efforts are sufficient to be protective, but only if quality characterization data exists to support the modeling. GeoServices will ensure that you are protected from the liabilities associated with an impacted property while being an advocate to protect the costs to your business.

GEOSERVICES' professional staff looks forward to a detailed discussion of your needs. Please call, e-mail, or contact us through our website, www.GeoServicesLtd.com.
