

GeoServices, Ltd.

It's All About Water™

Litigation Support

The large judgments associated with environmental litigation demand an expert that is both proficient in the technical issues and familiar with the civil judicial process. As an office of geologic professionals, GeoServices' technical resourcefulness is unsurpassed. Our extensive litigation experience includes testimony in a variety of state and federal jurisdictions. In many instances, our professionals have successfully supported settlement negotiations by bringing clarity to technical issues and assisting in allocating costs between potentially responsible parties.

Litigation support services may encompass any aspect of the services offered and typically include:

- Expert Testimony
- Technical Case Review
- Cost Analyses
- Modeling of Ground Water Flow and Contaminant Fate and Transport
- Evaluation of Vapor Intrusion
- GIS Database Preparation and Evaluation
- Demonstrative Preparation

Our forensic scientists have an outstanding record in the courtroom as well as providing consultation with counsel on technical approach and issues. By communicating openly and honestly with counsel, GeoServices has maintained unimpeachable credibility while supporting and serving counsel in its role as client advocate. GeoServices' approach consists of developing a simple, easy to understand, yet technically sound explanation of the site conditions and issues. We take the role of educator, because only when the judge and jury fully understand the situation, can a fair judgment be made. A complex explanation full of scientific jargon rarely persuades a jury and is vulnerable to critique by well-versed experts such as GeoServices' professionals.

GEOSERVICES' professional staff looks forward to a detailed discussion of your needs. Please call, e-mail, or contact us through our website, www.GeoServicesLtd.com.
