

GeoServices, Ltd.

It's All About Water™

Water Supply Services

Since its inception, GeoServices, Ltd. has responsibly developed sustainable water supply resources through proven scientific methods. "It's All about Water" reflects GeoServices' goal in sustainable development of water resources. We have successfully developed water supply sources for a wide range of clientele including public water suppliers, natural gas companies, as well as recreational and industrial facilities. GeoServices provides all of the services needed to locate, evaluate, and permit a new water supply source. Most water supply projects require at least the following:

- Fracture Trace Analysis and Well Siting
- Ground Water Availability Analysis
- Aquifer Testing
- Permitting
- Surface Water Assessments
- Wetlands Evaluations

In addition to water supply development, GeoServices also offers services for existing water supply sources, including:

- Wellhead Protection Delineation
- Well Rehabilitation Services
- Well Yield Assessments
- Well Field Analysis
- Water Quality Testing

As Benjamin Franklin said, "We will never know the value of water until the well runs dry." GeoServices' goal is to ensure that existing and newly developed water resources never run dry.

GEO SERVICES' professional staff looks forward to a detailed discussion of your needs. Please call, e-mail, or contact us through our website, www.GeoServicesLtd.com.
